

Non-verbal nominalizations and events

Viktoria Schneider
Event Semantics
07.11.2020

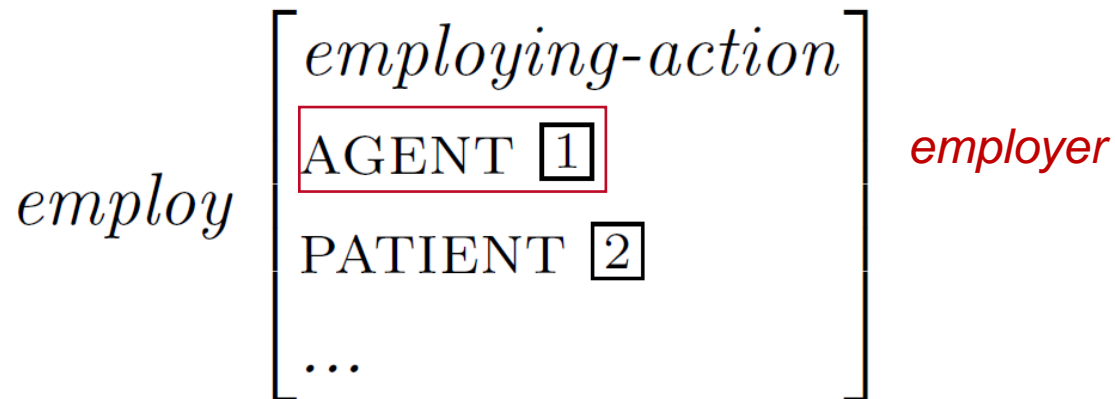

- Events → eventualities: events and states
- Participants of events or whole events selected by nominalizing affix
- Research tends to focus on verbal bases (e.g. Barker 1998; Kawaletz & Plag 2015)
 - e.g. *employ* in *employee* (Barker 1998), *reassure* in *reassurance* (Kawaletz & Plag 2015)

- Event inherited from base verb (Plag et al. 2018)
 - Event in verb in its semantic representation (e.g. Löbner 2013)
- events and event participants selectable for nominalizing affix
- Example: base: *to employ*, derivations: *employer*, *employee*
 - Nominalizing suffix creates different meaning of derivative
 - by selection of event
 - by participant in the event of the base word

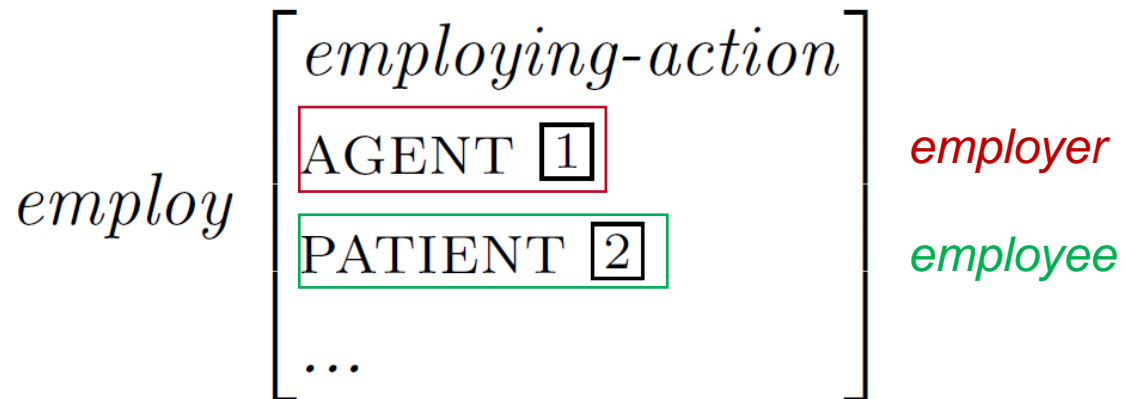

- Example derivations from *to employ*
- Partial frame for Verb *to employ*

<i>employ</i>	[<i>employing-action</i>]
		AGENT [1] <i>John</i>	
		PATIENT [2] <i>Paul</i>	
		...	

- Example derivations from *to employ*

- Example derivations from *to employ*

- What about formations like *debtee*, *biographee*?
- Many nominalizing suffixes also attach to non-verbal bases (Plag 1999, 2004; Bauer et al. 2013)
- What do we know about non-verbal bases?
- “the verbal relation is implied by context or can be inferred from the nature of the non-verbal base. [...] Such interpretations follow from the sort of activities that the base nouns could conceivably be involved in.” (Bauer et al. 2013: 233)

- Is it possible to find an event in the semantics of non-verbal base words?
- If yes, how can we model the semantic representation of these eventive structures in the non-verbal base?
- Focus on nominal bases and -ee derivations

- Investigate how non-verbal bases used for nominalizations
- Identify eventive elements in non-verbal bases
- Demonstrate interaction of elements in semantic representation of base and derivative
- Indicate change of reading(s) from base to derivative
- Use frame semantics (e.g. Löbner 2013; Plag et al. 2018)

- Data from BNC (Davies 2004) and COCA (Davies 2008)

debtee

biographee

covenantee

absentee

bargee

counselee

- Oxford English Dictionary (OED 2018) checked for possible base forms
- Bases which occur both as a verb and as a non-verbal category checked by frequency
 - COCA (Davies 2008) and COHA (Davies 2010) frequencies for possible base forms
 - As soon as the verbal base represents over 30% of all tokens of the base forms → base excluded

<i>charge</i>	Tokens	Percentage
V	8265	31
other	26469	69

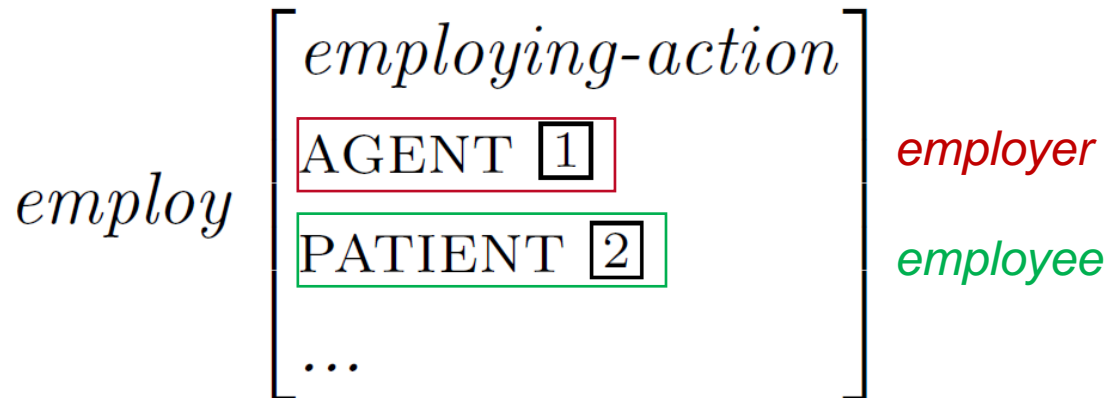

Numbers
COCA

- Data set includes mostly nominal bases; adjectival bases also attested

- -ee
 - 26 derivatives
 - 24 nominal bases
 - E.g.: *debtee*, *biographee*, *covenantee*
 - 2 adjectival bases
 - E.g.: *absentee*, *secondee*

- Possible to model semantic representation of base word and derivative
- Indicate different readings from base to derivative
- Make “inferred” eventive elements in base selectable for nominalizing suffix

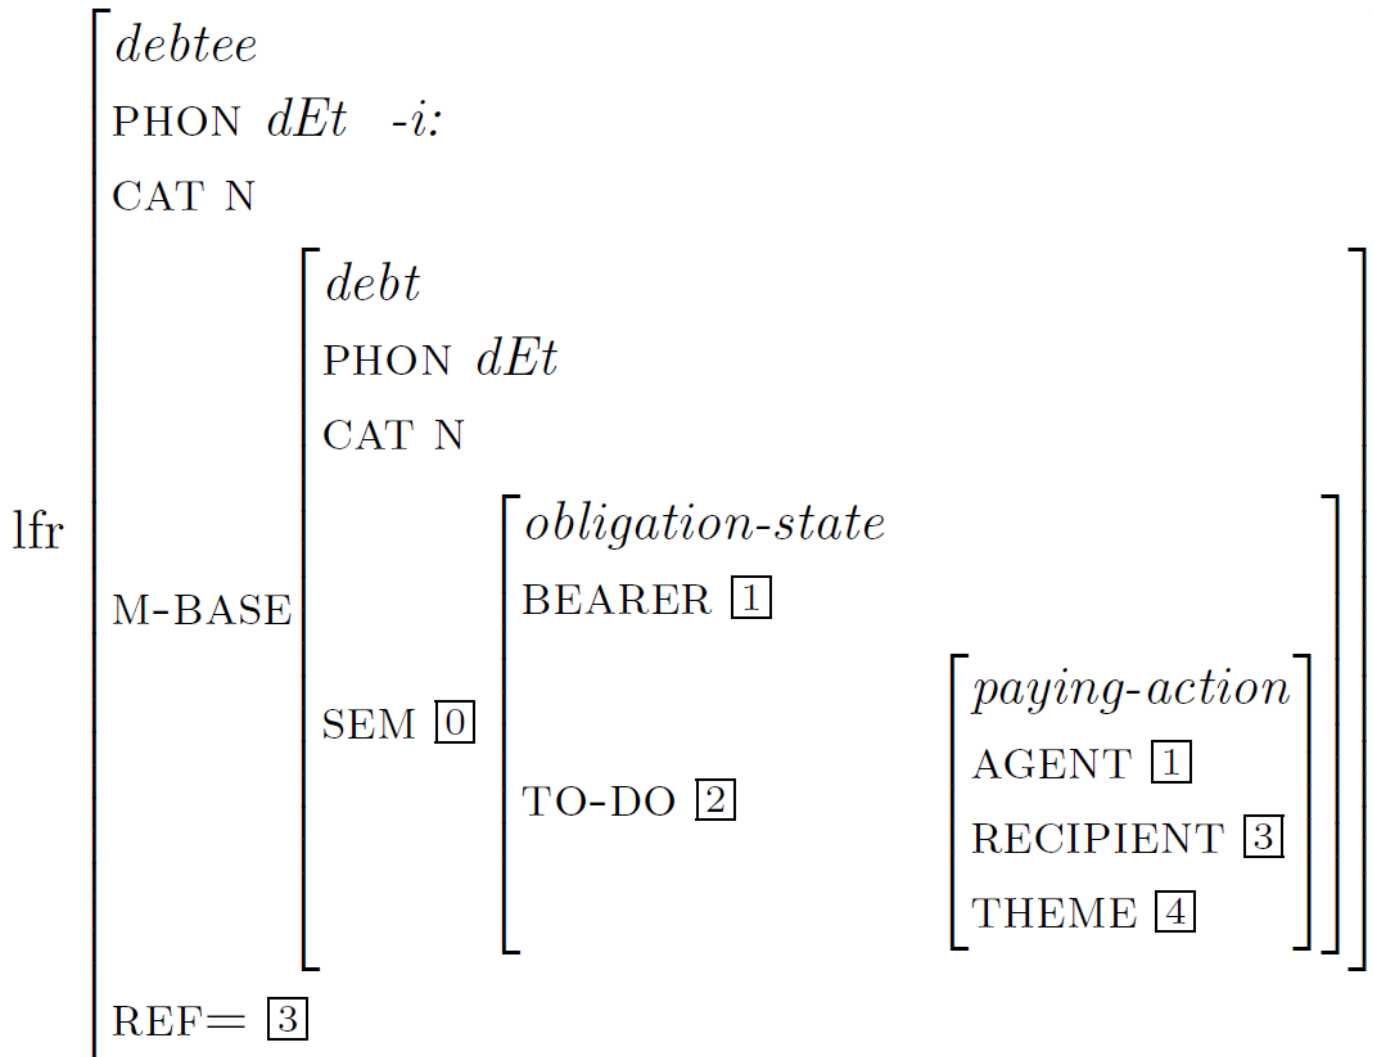

- Requires/selects non-volitional and sentient participant in event of base word (Barker 1998)
- Example: *employee*

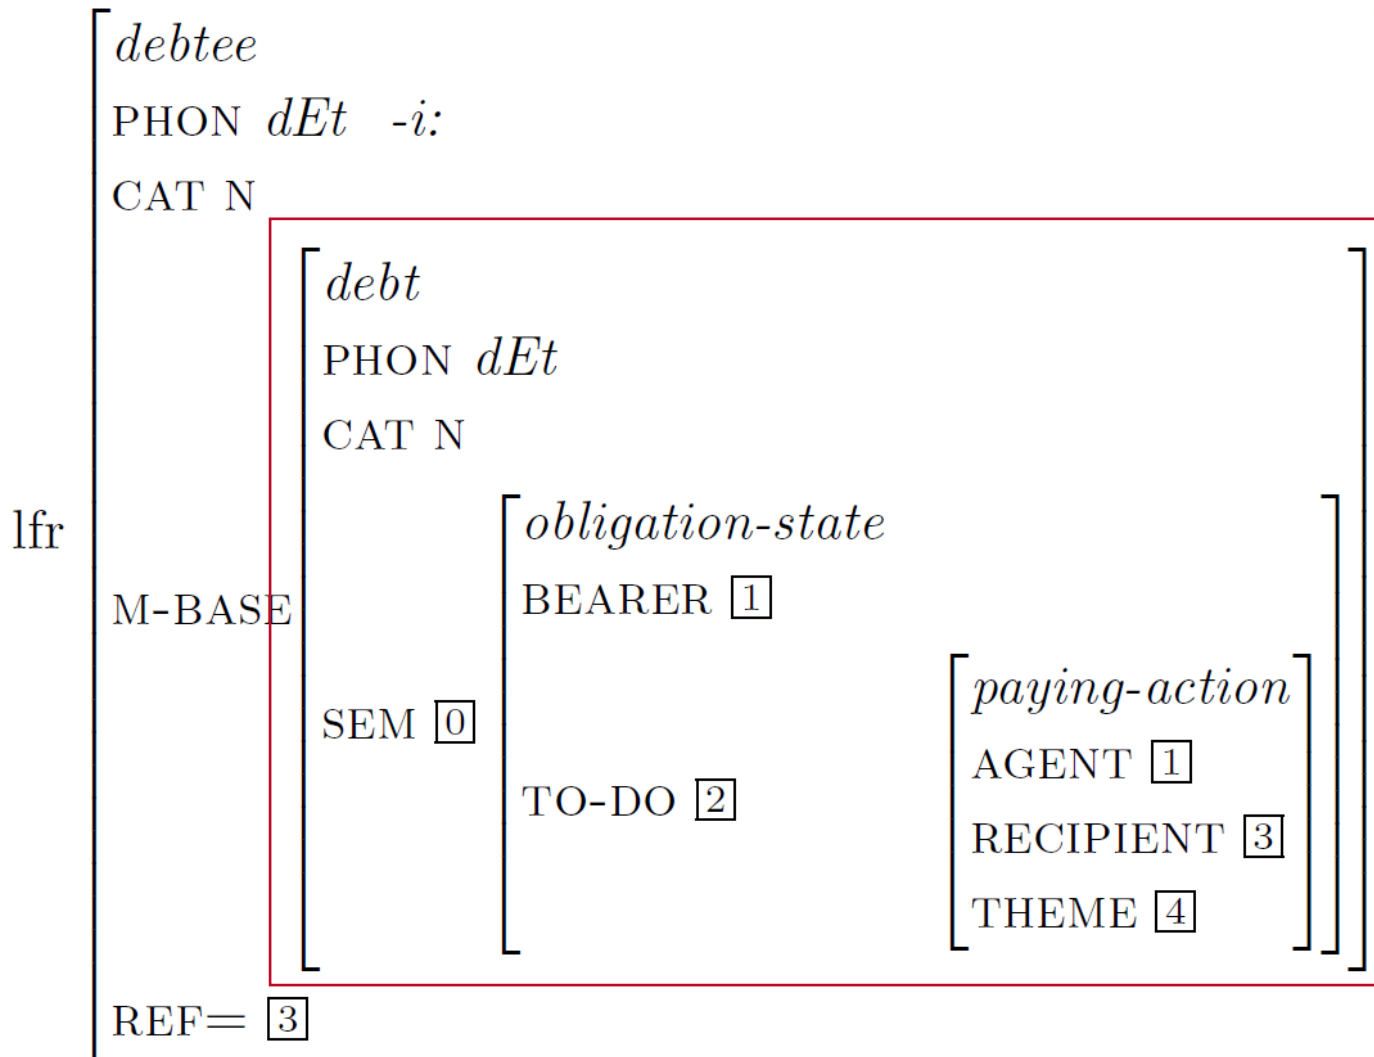

(1) *The ‘debtee’ is an old word for the creditor or payee. (BNC)*

- Base *debt* not clearly eventive at first sight
- OED definitions debt:
 - 1. “That which is owed or due: a sum of money or a material thing; a thing immaterial.”
 - 2. “A liability or obligation to pay or render something; the condition of being under such obligation.”
- Second definition denotes a state → *debt as obligation-state*
- *Debtee* is the person who gets something back

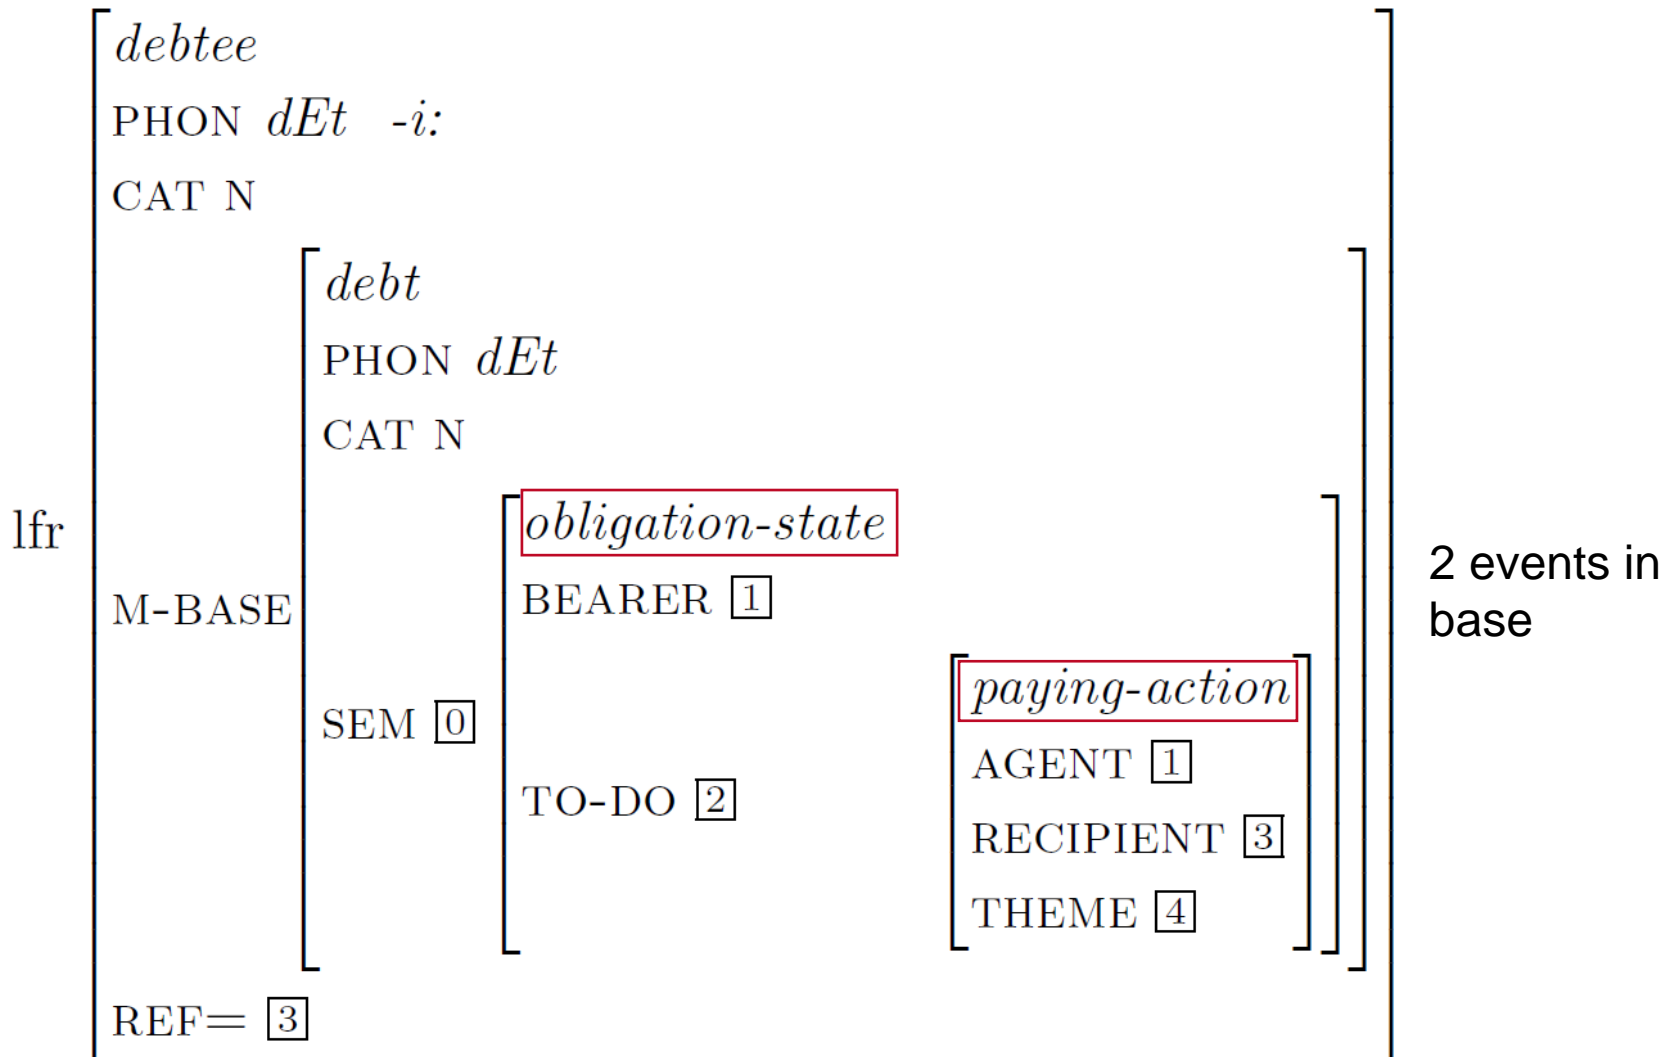

Example Analysis *debtee*

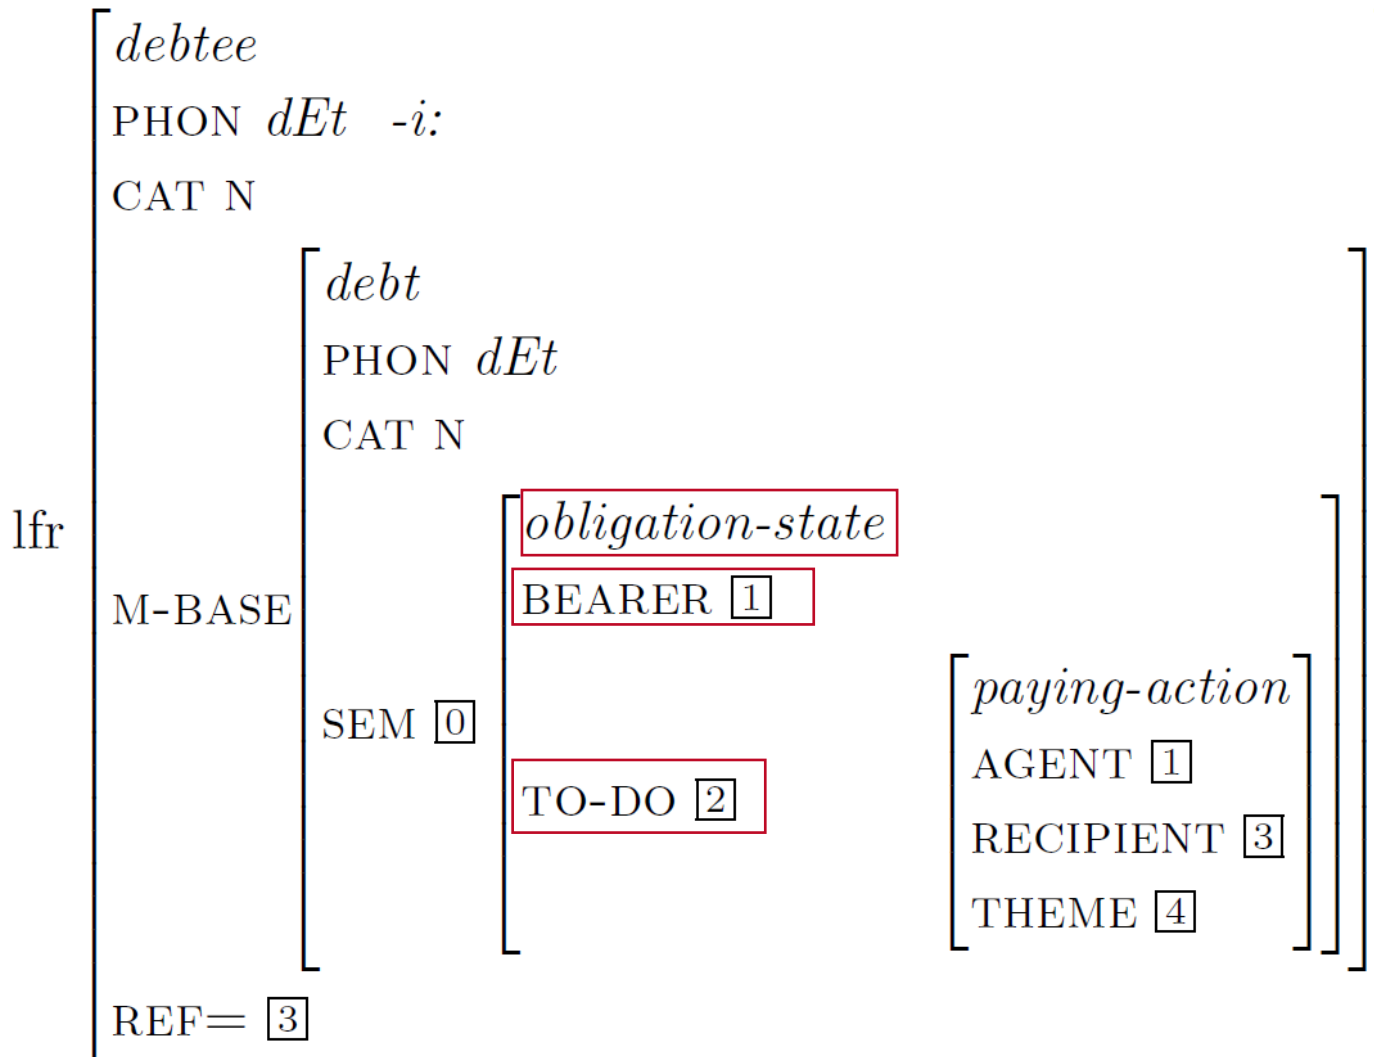

Example Analysis *debtee*

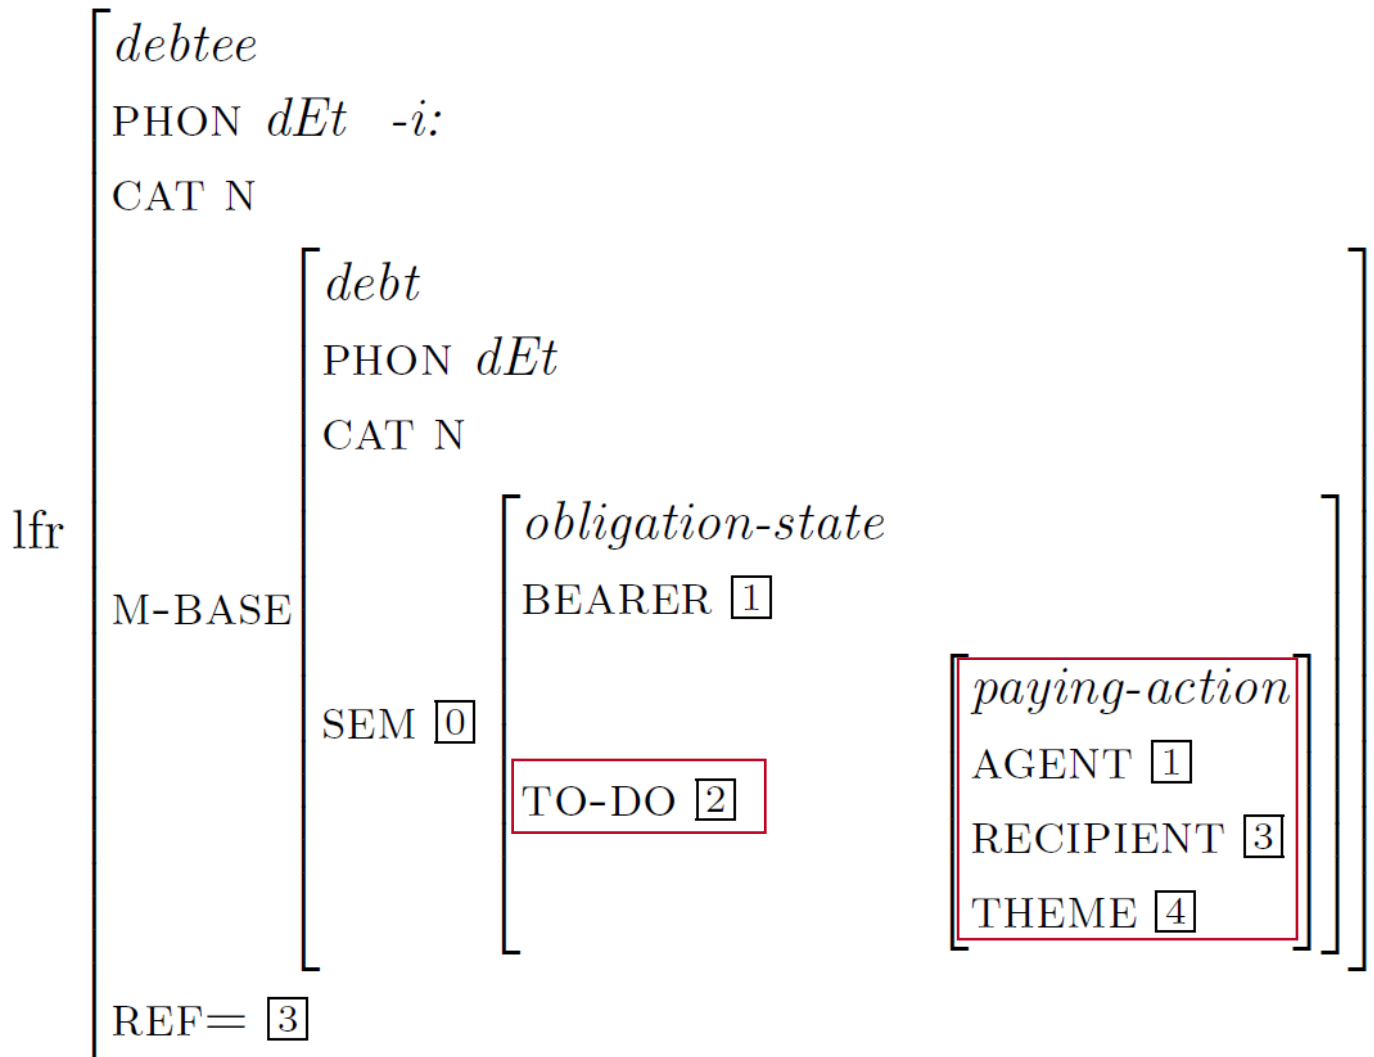

Example Analysis *debtee*

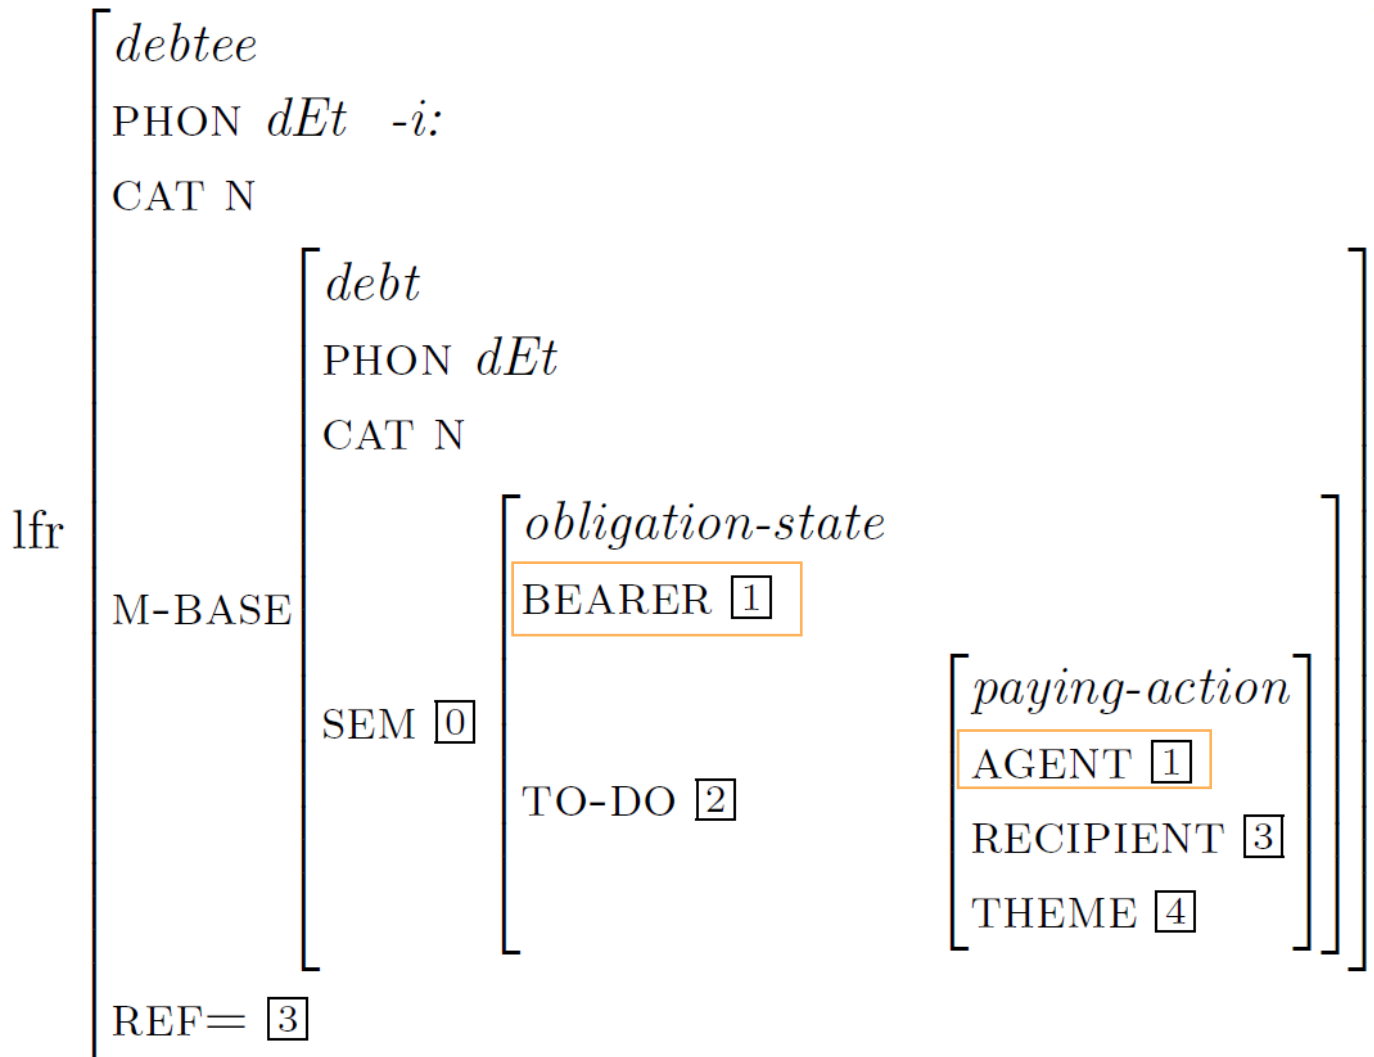

Example Analysis *debtee*

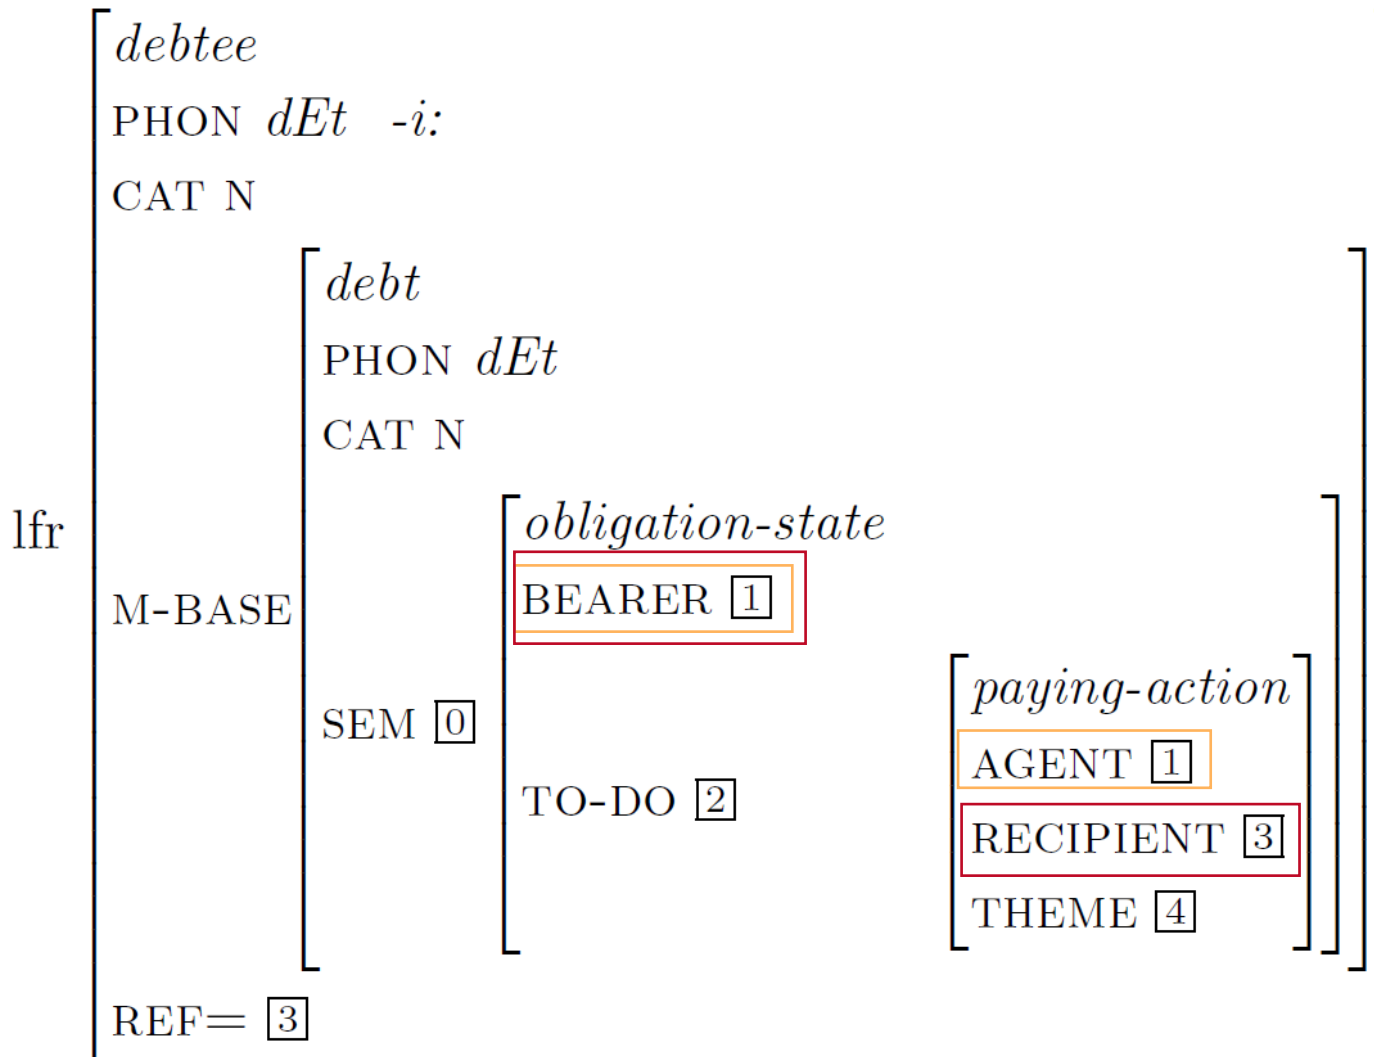

Example Analysis *debtee*

Example Analysis *debtee*

Problem:
which of
these two
possible
participants in
red is the one
selected by
the affix?

Example Analysis *debtee*

- -ee/-er resemblance
- Exceptions possible
 - E.g. can select AGENT-argument of intransitive verbs (Barker 1998)
 - Example: *escapee* although *escaper* also exists (Barker 1998)
 - Example: *bargee* → *the bargeman*
- Analogical effect as verbal bases more frequent
- Event/participant selection dependent on depth of embedding

- Event approachability for all types of derivatives in –ee
 - E.g. *biographee, covenantee, counselee*
- Model adjectival bases
 - E.g. *absentee*
- Model other nominalizing suffixes *-age, -ance, -ation, -er, -ment, -ure*
- Include N-V conversion
- Find possible generalizations for suffixes in isolation and for whole process
- Restriction event selection when more than one event in base
